

Patrick Childers

SKILLS

Most Proficient

Python, C#, ASP.NET MVC, SQL, AWS, JSON, REST, Docker, Git, Typescript, MongoDB, React

Satisfactory Understanding

MySQL, Microsoft Azure, Terraform

Sparse Grasp

Rust, Keras, PostgreSQL, Google GCP, Django, Jenkins, GraphQL, Kubernetes

EXPERIENCE

Frontline Education, Remote – Senior Software Engineer

March 2025 – July 2026

- Developed on a .NET service stack using MongoDB
- Worked on a modern React frontend with NextJS and Typescript
- Wrote unit tests using the Jest framework

Byrider Franchising, Carmel IN – Senior Software Engineer

March 2023 – March 2025

- Promoted from within to Senior I continued pioneering Python development for serverless architecture
- Continued .NET and SQL development for higher priority assignments
- Help train, guide, or otherwise lead junior developers
- Contributed to software design, and architecture discussions

Byrider Franchising, Carmel IN – Software Engineer

May 2021 – March 2023

- Initially wrote in C# now using .NET Core, quickly became more Python
- Wrote AWS Lambda functions in Python behind SQS, SNS, and API Gateway
- Wrote and pushed to adapt better documentation to unify the deployment procedures for multiple teams
- Adopted the use of Dev Containers to make better use of Docker
- Contributed to React and Wordpress (PHP) applications
- Released a new mobile application developed with the Flutter framework
- Leveraged Google Firebase for part of a custom authentication flow
- Designed and implemented an OpenAPI schema for a public-facing API sticking strictly to RESTful principles
- Documented and did troubleshooting Microsoft Azure hosted applications

- Used Git for source control with Bitbucket and Azure DevOps pipelines

Agilify Automation, Indianapolis IN – *Applications Developer*

May 2015 – March 2021

- The department I worked in at the Ministry Service Center became its own subsidiary organization, where I moved to a more R&D focused role
- I once again used Entity Framework to interact with MS SQL Server
- Part of R&D was to enhance the vendor products used for RPA, which required learning Keras and OpenCV's Python and .NET libraries
- I was exposed to Team Foundation Server in a greater capacity for source control
- Working in small Agile/Scrum teams to write libraries to wrap Google Cloud Service APIs
- Explored containerization tech (Docker) and Node.js to replace internal DevOps toolkits
- Adopted a WPF project and adapted it to meet new requirements
- Used MongoDB, a NoSQL database, to support an internal dashboard

Ascension Health Ministry Service Center, Indianapolis IN – *Business Optimization Specialist*

May 2015 – March 2020

- Hired to learn and use Blue Prism, an RPA vendor, for back office automation
- I used my existing development experience to write C# or VB scripts that enhanced the base product's functionality
- I also wrote scripts in vanilla Javascript, or with jQuery

Freelance IT

August – 2011 – May 2015

- Before, during, and after college I worked for homes or schools on a freelance basis
- This involved virus removal, small PowerShell scripts, software installation, and reimaging
- I worked on Microsoft Windows as well as a few Linux Distributions

TruckersB2B, Indianapolis IN – *.NET developer*

July 2013 – October 2014

- ASP and C# development in .NET Framework
- Maintained a codebase heavy in SQL
- Used Entity Framework as the ORM against MS SQL Server

EDUCATION

International Business College, Indianapolis IN – *Associate of Applied Science Degree: Computer Programming*

August 2011 – December 2012, Indianapolis

IBC Indianapolis introduced me to a myriad of technologies.

A focus on degree-specific education led to learning an incredible amount of programming/networking skills and only solidified my curiosity in software development.
