Senior Software Engineer

Create Software That Balances Quality, Simplicity, and Reliability

Engineer reliable software by applying deep expertise across cloud, mobile, and API-driven systems. Improve product quality through thoughtful architecture, disciplined coding practices, and reliable communication. Elevate team quality by mentoring developers, adapting quickly to shifting priorities, and collaborating effectively across functions. Advance tools and development workflows with quality testing.

Technical Skills

Amazon Web Services (AWS) | C# / .NET | CI / CD Pipelines | Docker | Dart / Flutter | Event-Driven Architecture
Git | GitHub / GitLab / Bitbucket | Jest / pytest / xUnit | JavaScript / TypeScript | Terraform
Microservices Architecture | Microsoft Azure | MongoDB / NoSQL | Python | React / Next.js | REST | SQL

Professional Experience

FRONTLINE EDUCATION, Wayne, PA (Remote) 2025 – 2026

Senior Software Engineer

- Developed .NET service stack backed by MongoDB, improving system reliability and data performance
- Refactored date-time processing for a new product using modern frontend frameworks, eliminating conversion inconsistencies and improving code quality
- Engaged in the discovery process for event-driven inter-service architecture

BYRIDER FRANCHISING, Carmel, IN 2021 – 2025

Software Engineer / Senior Software Engineer

- Pioneered Python development standards and best practices
- Introduced serverless architecture for backend systems
- Guided junior developers, accelerating ramp-up time and improving overall team delivery
- Led new mobile development, utilizing the modern mobile framework Flutter for cross-platform consistency and delivery
- Implemented Google Firebase authentication in a mobile application, reducing security attack surfaces and improving delivery
- Improved API clarity by implementing OpenAPI schemas and RESTful endpoints

ASCENSION HEALTH, AGILIFY AUTOMATION, Indianapolis, IN 2015 – 2021

Applications Developer / Business Optimization Specialist

- Scripted utilities used by automation software to enhance non-developer agents
- Developed robotic process automation (RPA) components, reducing manual effort and accelerating end-to-end process execution

ASCENSION HEALTH, AGILIFY AUTOMATION (Continued)

- Worked in small Agile / Scrum teams interfacing with Google Cloud Service APIs to support a company-wide office product shift to Google Cloud
- Invented novel uses for web-based code in RPA workflows
- Operated in a research and development (R&D) role with frequently changing requirements, supporting innovation and collaboration
- Served as educational consultant to third-party companies, providing RPA expertise that improved their automation strategy quality

TRUCKERSB2B, Indianapolis, IN

2013 – 2014

.NET developer

- Supported primary business-to-business (B2B) application and its database
- Maintained codebase heavy in SQL

Education**Associate of Applied Science (AAS)**, Computer Programming, International Business College, Indianapolis, IN
